

# **URGENT: Research Before Receiving COVID Vaccine!**

By Sister Mary Rose Reddy, MAT, MSE

*Figure 1 At least 40 children were paralyzed in the village of Gouro, Chad, Africa in December 2012 after receiving the Bill and Melinda Gates Foundation funded MenAfriVac for meningitis.*

December 7, 2020

This article will provide a brief review of some of the research regarding serious concerns about the proposed COVID-19 virus vaccines. Please consider this research carefully before deciding to receive the vaccine yourself, and before advocating that the vaccine be imposed on children or vulnerable adults. Please consult the references at the end of this article to read the full research articles cited.

- 1. These untested vaccines may cause infertility in women and may put the recipient at greater susceptibility for the wild strain of the Coronavirus-which if contracted would lead to a more severe reaction and possibly even to death. The effects of being vaccinated may well be more physically detrimental than the Corona Virus itself is.**

On December 1, 2020 [Dr. Michael Yeadon](#), former CSO and VP, Allergy and Respiratory Research Head with Pfizer Global R&D and co-Founder of Ziarco Pharma Ltd., and Dr. Wolfgang Wodarg, former head of the public health department in Germany filed an [application](#)<sup>1</sup> with the

---

<sup>1</sup> Dr. Wolfgang Wodarg and Dr. Michael Yeadon. "Petition/motion for administrative/regulatory action..." [https://2020news.de/wpcontent/uploads/2020/12/Wodarg\\_Yeadon\\_EMA\\_Petition\\_Pfizer\\_Trial\\_FINAL\\_01DEC2020\\_EN\\_unsigned\\_with\\_Exhibits.pdf](https://2020news.de/wpcontent/uploads/2020/12/Wodarg_Yeadon_EMA_Petition_Pfizer_Trial_FINAL_01DEC2020_EN_unsigned_with_Exhibits.pdf)

European Medicines Agency (EMA) that all Covid vaccines testing on humans be immediately stopped until greater safety can be assured. They cited in particular the Pfizer/BioNTech vaccine which uses mRNA to incite development of antibodies to attack the spike proteins on the Corona virus. However, as Yeadon explained, “spike proteins also contain syncytin-homologous proteins, which are essential for the formation of the placenta in mammals such as humans.” These antibodies may thus trigger an immune reaction which would render women who receive the vaccination infertile for an indefinite [duration](#).<sup>2</sup>

Dr. Wodarg and Dr. Yeadon pointed out that there is a possibility that the COVID-19 vaccinations might actually create a greater and more severe susceptibility to wild strains of the virus:

For a vaccine to work, our immune system needs to be stimulated to produce a neutralizing antibody, as opposed to a non-neutralizing antibody. A neutralizing antibody is one that can recognize and bind to some region (‘epitope’) of the virus, and that subsequently results in the virus either not entering or replicating in your cells. A non-neutralizing antibody is one that can bind to the virus, but for some reason, the antibody fails to neutralize the infectivity of the virus. In some viruses, if a person harbors a non-neutralizing antibody to the virus, a subsequent infection by the virus can cause that person to elicit a more severe reaction to the virus due to the presence of the non-neutralizing antibody. This is not true for all viruses, only particular ones. This is called Antibody Dependent Enhancement (ADE), and is a common problem with Dengue Virus, Ebola Virus, HIV, RSV, and the family of coronaviruses. In fact, this problem of ADE is a major reason why many previous vaccine trials for other coronaviruses failed. Major safety concerns were observed in animal models. If ADE occurs in an individual, their [response to the virus can be worse](#) than their response if they had never developed an antibody in the first place. This can cause a hyperinflammatory response, a cytokine storm, and a generally dysregulation of the immune system that allows the virus to cause more damage to our lungs and other organs of our body. In addition, new cell types throughout our body are now susceptible to viral infection due to the additional viral entry pathway. There are many studies that demonstrate that ADE is a persistent problem with coronaviruses in general, and in particular, with SARS-related viruses. ADE has proven to be a serious challenge with coronavirus vaccines, and this is the primary reason many of such vaccines have failed in early in-vitro or animal trials.<sup>3</sup>

<sup>3</sup> Dr. Wolfgang Wodarg and Dr. Michael Yeadon. “Petition/motion for administrative/regulatory action...”  
Section C. VIII.  
[https://2020news.de/wpcontent/uploads/2020/12/Wodarg\\_Yeadon\\_EMA\\_Petition\\_Pfizer\\_Trial\\_FINAL\\_01DEC2020\\_EN\\_unsigned\\_with\\_Exhibits.pdf](https://2020news.de/wpcontent/uploads/2020/12/Wodarg_Yeadon_EMA_Petition_Pfizer_Trial_FINAL_01DEC2020_EN_unsigned_with_Exhibits.pdf)

Dr. Yeadon and Dr. Wodarg identify another very serious health risk associated with the Pfizer/BioNTech vaccine:

In the Pfizer/BioNTech mRNA vaccine candidate, polyethylene glycol (PEG) is found in the fatty lipid nanoparticle coating around the mRNA. Seventy percent of people make antibodies to PEG and most do not know it, creating a concerning situation where many could have allergic, potentially deadly, reactions to a PEG-containing vaccine. PEG antibodies may also reduce vaccine effectiveness.<sup>4</sup>

Five vaccine producers which are close to marketing a vaccine are: Moderna, Pfizer/BioNTech, Johnson & Johnson, Astra-Zeneca/Oxford, and GlaxoSmithKline. Moderna reported 100% of recipients in early trials reported adverse reactions to the vaccine while both Pfizer and Astra-Zeneca/Oxford had a 50% adverse reaction report in their clinical trials. Astra-Zeneca/Oxford had to pause its study after a death occurred (reportedly in the placebo group); Johnson & Johnson and Moderna also reported life-threatening reactions in their [vaccine trials](#).<sup>5</sup>

## **2. Both the Moderna and the Pfizer vaccines make use of mRNA therapy which has never been approved before for use in a vaccine.**

Moderna is a multi-billion-dollar company that came into being in 2010. The name “Moderna” was coined to refer to “modified RNA” -a reference to the mRNA technology that the founders were hoping to harness to develop vaccines to treat many different diseases.<sup>6</sup> By November 2020, despite its huge economic success, [Moderna](#) had not had even one of its experimental treatments approved.<sup>7</sup>

Diverging significantly from typical methods of vaccine production both Moderna and Pfizer are resorting to mRNA in their COVID-19 vaccines.

<sup>5</sup> Alix Mayer, MBA. “Leading COVID Vaccine Candidates Plagued by Safety Concerns.” The Defender-Children’s Health Defense News and Views. 13 November 2020. <https://childrenshealthdefense.org/defender/covid-vaccine-candidates-safety-concerns/>

<sup>6</sup> Damien Garde and Jonathan Saltzman. “The Story of mRNA: how a once dismissed Idea became a leading technology in the Covid Vaccine race.” STAT. 10 November 2020. <https://www.statnews.com/2020/11/10/the-story-of-mrna-how-a-once-dismissed-idea-became-a-leading-technology-in-the-covid-vaccine-race/>

<sup>7</sup> Ibid.

The Moderna website explains, “ [mRNA](#) is the set of instructions by which cells make all proteins and send them to various parts of the body. mRNA medicines take advantage of normal biological processes to express proteins and create a desired therapeutic effect.”<sup>8</sup>

Alex Myers explains this process a little more graphically, “Basically, mRNA vaccines are intended to biohack — through [genetic modification](#) — a human being to produce parts of a virus.”<sup>9</sup>

Dr. Miklos Lukacs de Pereny, a research professor of science and technology policy at Universidad San Martin de Porres in Peru, explained that the mRNA vaccine technology being used in the Moderna and Pfizer vaccines [could alter a person’s genome](#) (their DNA structure). He explained that they will code the mRNA that they are introducing into the nucleus of the cell by arranging the nucleotides in a particular order to elicit a particular response. Although the Moderna and Pfizer researchers claim that their goal is to create proteins that will in turn cause the body to create antibodies to fight against the coronavirus, Dr. Lukacs de Pereny claims that they can actually code the mRNA to incite any number of reactions. He gave the examples that they could code the mRNA to decrease oxygen in the red blood cells or to inhibit a male’s ability to generate sperm.<sup>10</sup> He sees this type of vaccine as an example of the transhumanist movement which is based on absolute relativism and materialism. Dr. Lukacs de Pereny explains that transhumanism is antithetical to the Judeo-Christian world view which regards persons as individual subjects created in the image and likeness of God; transhumanists consider the human body merely as an object to be manipulated.<sup>11</sup>

Joanna Roberts, deputy editor of *Horizon*, the EU’s science magazine, states that there are [many unknowns](#) with the use of mRNA technology in a COVID-19 Vaccine. Some of these include:

whether the proteins that have been chosen for the vaccine are the right ones to prevent a coronavirus infection in the body, how targeted the immune response is to this particular coronavirus, how long any immunity would last, and whether it causes side-effects such as increased inflammatory responses like redness and swelling or, in the worst case, aggravates disease.<sup>12</sup>

### 3. The vaccines do not prevent spread of the virus; nor is prevention of transmission even being tested in current vaccine trials.

Dr. Anthony Fauci stated that the goal of the vaccines is just to prevent personal infection and not to prevent transmission of the virus.<sup>13</sup>

As Dr. Peter Doshi, assistant professor of pharmaceutical health services research at the University of Maryland School of Pharmacy, explained in the *British Medical Journal*, the two biggest problems with the vaccine trials of the leading contenders are: First, none of the trials are designed to test whether the vaccine can reduce severe COVID-19 symptoms of hospital admissions, ICU or death. Second, the trials are not designed to test if the vaccine can interrupt transmission of the Covid virus.<sup>14</sup>

On November 25, 2020 Dr. Sin Hang Lee, pathologist and director of Connecticut's Milford Molecular Diagnostics Laboratory, submitted a petition to the U.S. Food and Drug Administration that they stop all Covid vaccine trials until better studies can be designed to ensure the safety of those to be vaccinated.<sup>15</sup> He takes issue with the inefficiency of the testing which was used to determine positive Covid test results in the trials. Participants in the study were diagnosed as having contracted the virus *even though they were only expressing symptoms of the virus*. He states that in order to determine if a person actually has contracted the Covid virus, it must “be verified by Sanger sequencing to confirm that the tested samples in fact contain a unique SARS-CoV-2 genomic RNA.”<sup>16</sup>

Dr. Sin Hang Lee considers the goals of the vaccine study to be inadequate and misleading:

If the vaccine is approved without an appropriate and accurate review of efficacy, then any potential acceptance or mandate of these vaccines is likely to be based on inaccurate evidence regarding the vaccine, namely that it will stop transmission of the virus from the vaccine recipient to others and/or that it will reduce severe COVID-19 disease and deaths. The Pfizer

<sup>16</sup> Ibid.

trial protocol is currently not designed to determine whether either of those objectives can be met;<sup>17</sup>

#### **4. Highly reputable doctors insist that a vaccine for the Corona virus is not necessary and that therapeutic medicines are much safer than untested vaccines.**

Dr. Harvey Risch, MD, PhD, Professor of Epidemiology at Yale School of Public Health estimated in July 2020 that half and possibly even three-fourths of the 140,000 U.S. COVID-19 deaths that had occurred by that time could have been prevented by the [use of hydroxychloroquine](#) (HCQ).<sup>18</sup>

Risch praised the proven effectiveness of (HCQ) in fighting COVID-19; he also emphasized that those who oppose the use of HCQ have no science to back up their denial that it is an effective treatment for this virus. Risch stated, “The [evidence in favor of hydroxychloroquine](#) benefit in high-risk patients treated early as outpatients is stronger than anything else I’ve ever studied.”<sup>19</sup>

Dr. Simone Gold of America’s Frontline Doctors has illustrated how effectively hydroxychloroquine (HCQ) is both in preventing COVID-19 and in treating the virus in its early stages.<sup>20</sup> She also discusses how tragic it is that so many lives have been lost to COVID-19 that could have been saved if doctors had been allowed to use HCQ in the treatment. Her research illustrates the safety and effectiveness of HCQ and also discusses in what states and in what countries it is readily available versus places [where it has been banned](#). She notes a correlation between places where HCQ is readily available and lower COVID-19 mortality rates as compared to places where doctors’ ability to prescribe it has been banned or made extremely difficult.<sup>21</sup>

Expert virologist Dr. Steven Hatfill explains that there are now [53 studies](#) that show positive results of hydroxychloroquine in COVID-19 infections; he wonders why the media is suppressing this knowledge so vehemently and opposing it with disinformation.<sup>22</sup>

Dr. Michael Yeadon, by illustrating the degree of population immunity which has presumably been achieved to the virus by this time, demonstrates that the COVID-19 [Pandemic is effectively over](#).<sup>23</sup>

Yeadon criticized the UK's SAGE (Scientific Advisory Group for Emergencies) for assuming that 100% of the population was susceptible to COVID-19, (that no previous immunity existed), and for falsely believing that determining the percentage of the population that has antibodies indicates the percentage of the population that has been infected.<sup>24</sup>

It can be assumed that [previous immunity to this virus already existed](#) in a large percentage of the population because it is related to the common cold. As Yeadon explains:

As an experienced life scientist, I would have predicted that before any experiments had been done those who'd been infected by any of those common cold-causing coronaviruses would now be carrying a level of resistance – let us call it immunity – to infection by closely-related viruses.<sup>25</sup>

Yeadon explains that since the majority of the population is no longer at risk for contracting the virus a vaccine is unnecessary. He states, “You do not vaccinate people who aren't at risk from a disease. You also don't set about planning to vaccinate millions of fit and healthy people with a vaccine that hasn't been extensively tested on human subjects.”<sup>26</sup> Since there are therapeutic drugs already known to effectively treat Covid-19, it is an unjustified health risk to inject a healthy person with an untested vaccine that hasn't been proven to either prevent serious Covid symptoms or to prevent transmission of the virus.

## **5. Several of the leading candidates make use of aborted fetal cells in their vaccines.**

Both Moderna and Pfizer do not use aborted fetal tissue in their vaccines, but they did use [aborted fetal cells](#) in the testing phase.<sup>27</sup> Although some argue that this use of fetal cell lines is sufficiently remote to justify use of the Moderna or Pfizer vaccines, Dr. Stacy Transancos, a chemist, argues that approving such use in the vaccines' development could lead to a degeneration of expectation

of ethical standards in regard to future vaccine development.<sup>28</sup> In this she agrees with Bishop Joseph Strickland of the Diocese of Tyler, TX who stated:

Moderna vaccine is not morally produced. Unborn children died in abortions and then their bodies were used as ‘laboratory specimens.’ I urge all who believe in the sanctity of life to reject a vaccine which has been produced immorally.<sup>29</sup>

The AstraZeneca vaccine is a modified virus that is produced in HEK-293 cells (which are from a baby aborted in the Netherlands in the 1970s).<sup>30</sup> The US government has issued grants totaling nearly \$2 billion for the development of Covid-19 vaccines using fetal cell lines.<sup>31</sup> The CanSino Biologics, Inc., AstraZeneca, Johnson & Johnson, University of Pittsburgh, and Altimmune COVID-19 vaccines all [make use of aborted fetal tissue](#).<sup>32</sup>

Additionally of moral concern is that researchers in the Pfizer/BioNTech vaccine trials are requiring that the men participating in the trial either be abstinent from heterosexual relations or use condoms during the entire time of the study. Women may not be pregnant, nor breast feeding, and they must be using “acceptable” contraceptives:

A female participant is eligible to participate if she is not pregnant or breastfeeding, and .... [using an acceptable contraceptive method](#) as described below during the intervention period (for a minimum of 28 days after the last dose of study intervention).<sup>33</sup>

## 6. The motives of the major vaccine promoters appear to be financial and eugenic.

While the suffering and deaths that the Corona virus have caused are certainly a real cause of anguish, it is evident that many of the people who contracted the Corona virus and died also had other debilitating conditions which probably contributed to their deaths. In fact, Fr. David Nix posted a screenshot of a CDC post stating that only [6% of Covid deaths](#) in the United States could be attributed to Covid alone.<sup>34</sup> This post was later taken down by the CDC.

In a lecture on November 13, 2020, Dr. Genevieve Briand, Assistant Director for MS in Applied Economics at John Hopkins University, presented her research indicating that the Corona virus did not cause an increase in the average number of annual deaths in the United States. Her research was immediately [censored](#) by the university.<sup>35</sup>

Robert F. Kennedy, Jr., an environmental lawyer, who has spent years advocating for safe vaccines for children, clearly illustrated in a recent interview how [dubious are the motives](#) of some of the Covid vaccine promoters:

Half of CDC's budget goes to buying and selling vaccines. FDA, half of its budget comes from the pharmaceutical companies. And with NIH [National Institutes of Health] which is the other big agency, they are collecting tens of millions or hundreds of millions of dollars on vaccine patents. So they work on the vaccine at the outset, they transfer the patent to Gilead or Pfizer. The Moderna vaccine was completely developed by Tony Fauci, he hands it to a private group, they put 2 billion dollars of federal money into allowing them to develop it, and then Tony Fauci's agency keeps half the profits from the vaccine.<sup>36</sup>

Bill Gates is a major COVID-19 vaccine funder. He would like to [reduce the world's population drastically](#).<sup>37</sup> His foundation promotes his eugenic goals. Consider this incident:

Bill and Melinda Gates Foundation went into Chad and vaccinated at least 50 children with a drug developed specifically for Africa called, "MenAfriVac." Within 24 hours, it was reported

that the children, some of whom were as young as 7, developed hallucinations, convulsions and ultimately paralysis.<sup>38</sup>

A large amount of published research on the [MenAfriVac](#) vaccination program denies that the vaccine had this effect; but if you keep researching you will find the true story of this inexcusable tragedy!<sup>39</sup>

## **7. The vaccine will include tracking. Once you have received it you will be able to be tracked very easily through your cell phone.**

In some parts of the world people who have tested positive for Covid-19 are being [tracked through their cell phones](#) using contact tracing to warn people who have been in close proximity to them that they may have been exposed to the virus.<sup>40</sup>

It is not published whether there will be something in the Covid vaccines that will allow scanners to see that a person has been vaccinated but as Dr. Wolfgang Wodarg explains:

Pfizer/BioNTech is also inserting an ingredient derived from a marine invertebrate, mNeonGreen, into its vaccine. The ingredient has bioluminescent qualities, making it attractive for medical imaging purposes, but it is unclear why an injected vaccine would need to have that quality. mNeonGreen has unknown antigenicity.<sup>41</sup>

Clearly [tracking the population](#) in this way poses a great risk to freedom and could easily become a tool of totalitarianism. It may also come about that people who have not received the vaccine will be deprived of many basic rights.<sup>42</sup>
